REGISTER NOW →

4C, with support from our [training partners](#), is hosting several LDAR and Optical Gas Imaging focused training courses that will be offered at the 2018 4C Conference in San Antonio, Texas.

The training courses will provide education to HSE industry members, consultants, and vendors on everything from the basics to the more advanced topics in LDAR and OGI implementation and compliance:

LDAR Excellence

A 2.5-Day intense dive into best practices, continuous improvement and new-generation technology for all things Leak Detection and Repair / Fugitive Emissions. This workshop will feature discussion on LDAR program revalidation, as well as technology, tools and work practices to help elevate your LDAR program to excellence with cost-effective and efficient opportunities for improvement.

LDAR – Beyond Basics and Underneath the Rules

An in depth look at LDAR Basics from a fresh perspective.

[More Info →](#)

Optical Gas Imaging

Offered by FLIR Systems, this course covers the regulatory framework for optical gas imaging, the OGI certification process, how to use the IR camera to find leaks, how optical gas image is a combination of art, science, technique, and interpretive skills, and the basic safety practices for doing an OGI inspection.

[More Info →](#)

Advanced topics in Quantitative Optical Gas Imaging

This course will review the fundamental aspects of optical gas imaging and describe how they relate to the new OGI related regulations. The OGI related requirements for a OOOOa compliant monitoring plan will also be examined. A Quantitative Optical Gas Imaging method will be presented along with results from blind testing and side-by-side comparisons to other quantitative methods. Applications for QOGI in the oil and gas sector will be presented and discussed. The course will conclude with a survey of the latest developments in the field of Optical Gas Imaging with an emphasis on applications for the petroleum and petrochemical industries.

Video Imaging Spectral Radiometry as an Alternative Monitoring Method for the Refinery Sector Rule

A new technology has been developed that can be used to remotely monitor flare performance and provide instant feedback to a flare operator. The technology is called Video Imaging Spectro-Radiometry (VISR), and it has been validated with full scale flares and extractive sampling tests. With VISR, a flare operator will have a dashboard that provides essential flare operation and performance parameters including directly measured combustion efficiency, level of smoke, flame stability, flame size, and heat released from flare combustion. With this flare dashboard, an operator finally has the information needed to operate the flare at peak performance day or night.

Guideware Software Training

Learn what is new in the GuideWare LDAR software, and how to utilize it's newest, advanced features to enhance and improve your LDAR program.

Topics covered will include:

What's new in GuideWare version 2.5

Using Smart P&ID Drawings for your Inventory Jobs

GuideWare's New Scheduling Tool

Introducing 'GuideWare Connect' Mobile Connection Application

Database QA/QC – The Snapshot Reporting Tool

Audit Survival Tools – Learn how to audit your own data

Setting up OOOOa in GuideWare

Inspection Workflow with an Android Tablet and the IR Camera

Introducing GuideWare Fenceline Monitoring Web Application
